Storage Cabinet for Lithium Batteries

Specifications	
Dimensions	1200x600x1950

This unit is a tall steel cabinet is for lithium batteries, the hinged doors have solid and the unit is fireproof and lockable, at 47°C degrees and above there's an automatic hydraulic mechanism for the doors to close, concealing any flame to the unit itself, the doors are wardrobe style This lithium battery cabinet is fireproof due to fibre ceramic insulation The cabinet does allow air intake, one vent at the top of the cabinet and one at the bottom, on temperatures reaching over 70°C the vents close, starving the fire/poential fire of oxygen As another fail safe the cabinet has an automatic self tilting system which, in the event of a fire, slides the stored batteries off of the shelf and into the tank at the bottom of the unit, immersing them in water, extinguishing any current flame and excludes the chance of it recombusting
