Sump Capacity	85 L (100 L without grid)
UDL	100kg
Material	low-density polyethylene ensures lightweight operation with the

The BT100G is a compact trolley designed to hold 4 x 25 litre drums, the tray is constructed from medium density polyethylene (MDPE) which ensures a high resistance to various aggressive and non aggressive chemicals. This spill tray is lightweight yet sturdy and rigid, it's mounted on 4 castor wheels, the two rear wheels are swivel braked castors. This means the drip tray is easy to manoeuvre in a variety of environments. The removable grid comes as a standard, when the grid is used the capacity of the sump tray is 85L, when the tray is removed the available capacity becomes 100L. The tray is simply to keep any potential spills and the drum itself separate. The handle is made from stainless steel. Any load to be stored on this unit should be evenly distributed.
