Weight	470kg empty, 1775kg full
Sump Volume	1250 L

This emergency tank shower is best used when no other constant water source is available in the event of an accident. Our shower has a 15 minute supply of constant flowing water when full, with it's 2000ltr capacity, it is ideal in the event of a spillage. The activation time for the shower when the valve has been turned is 1 second, rinsing the individual as quickly as possible. The tank sits on top of a 40x40x3mm carbon steel frame. This frame is galvanized to increase protection against corrosion. The tank itself is made of polyethylene.
